Professional Summary

Data Scientist and Machine Learning Engineer with 7+ years of experience architecting and delivering custom predictive analytics and machine learning systems and big data architectures for mission critical, classified defense environments. Experienced in building and deploying models that improve forecasting, optimize operations, and deliver actionable insights. Skilled in Python, SQL, and C++, with hands on experience in data wrangling, pipeline automation, and applying statistical methods to large scale datasets. Proven ability to own end to end data science solutions, from data modeling and feature engineering through optimization, testing, deployment, and long-term sustainment, while collaborating closely with software engineers and system stakeholders.

Technical Skills

Python, C/C++, SQL, R, Java, JavaScript, PyTorch, Numpy, Polars, Pandas, Scikit Learn, Matplotlib, Deep Learning, Predictive Modeling, Statistical Modeling, Git, Docker, DevOps, Unit Testing, Machine Learning, Data Engineering, MBSE, Tableau, SysML, MLOps, DoD Architecture Frameworks, CI/CD, Requirements Analysis & Traceability, Agile/Scrum, SAFe, Jira, GitLab, Azure, AWS, GCP

Certifications

Azure Artificial Intelligence Engineer (AI-102), AWS Machine Learning (MLS-C01), Azure DevOps Expert (AZ-400), Azure Data Engineer (DP203), Azure Admin (AZ-104), Microsoft Power BI Data Analyst (PL-300), Google Cloud Gen AI Leader, CompTIA Security+, Linux+, PMI PMP, PMI-ACP, ITIL 4, PCAP

Education

M.S. in Data Science & Analytics – Georgia Institute of Technology
M.S. in Computer Science, AI/ML – Western Governors University
Graduate Certificate, Artificial Intelligence – Carnegie Mellon University
B.S. in Computer Science – Western Governors University
B.B.A. in Project Management – Polytechnic University
Full Stack Software Development Program – TechWise by Google

Professional Experience

Technical Program Manager – AI/ML & Data Science

Artificial Intelligence Integration Center, U.S. Army

Jul 2025 – Present

- Lead technical architecture and core logic design for AI enabled defense platforms, utilizing a first principles approach to define system requirements and interface controls for complex data challenges.
- Manage 3 Agile teams delivering AI/ML models and backend infrastructure for classified projects, ensuring alignment with mission and technical goals.
- Direct the deployment of resilient Azure based data systems supporting intelligence workflows for classified projects.
- Oversee technical roadmap planning and requirements analysis for multi-phase programs, ensuring all modular data solutions align with stringent mission critical stability and maintainability standards.

Lead Data Scientist/Software Developer – Predictive Analytics

Artificial Intelligence Integration Center, U.S. Army

Jul 2018 – Jun 2025

- Collaborated with DEVCOM engineers to develop a real time trajectory prediction system for UAS platforms, integrating LIDAR sensor data to track and forecast armored vehicle movements.
- Developed and deployed statistical and machine learning models to forecast supply chain demand, reducing operational inefficiencies by 45% within a \$60M logistics program.
- Developed predictive modeling software using C++ and Python, implementing major application features and owning the maintenance and improvement of the codebase over time.
- Designed and implemented robust, from scratch SQL based data ingestion and ETL pipelines, standardizing data from 7 disparate sources to support scalable, reusable analytics workflows.
- Applied software engineering best practices within the data domain, including version control, documentation, and structured development workflows to support testing, integration, and future extensibility.

Senior Program Manager – Logistic Systems & Compliance

Logistics Readiness Center, U.S. Army

Jul 2014 – Jun 2018

- Directed 100+ personnel and oversaw \$20M in equipment, managing real time logistics and maintenance tracking.
- Supervised \$60M in transactions while improving audit readiness and inventory system integrity using digital tracking tools.
